(2) In prescribing the rate or any variation of the rate of biofuel levy, the Minister shall seek to ensure that (taking one year with another) the sums realised by applying that rate or any variation of the rate to the volume assessments meet but do not exceed the estimated expenses of the Agency and of each designated subsidiary.

(3) For the purpose of determining in any year the estimated expenses of the Agency, the Minister may—

(a) consider the information contained in the Agency’s strategy statement,

(b) have regard to such information as is provided under section 29, and

(c) such other additional rate as the Minister considers appropriate taking into account the cost of recovering unpaid levy, including any bank charges the Agency may incur in maintaining a bank overdraft to cover a shortfall in funds arising out of unpaid levy.

44W.— (1) The Minister may make regulations providing for the keeping of specified records by biofuel obligation account holders in respect of matters connected with the biofuel obligation and the biofuel levy, including the form in which and the period for which such records are to be kept.

(e) if the person giving the notice considers that notice should be given immediately and a fax machine is located at an address mentioned in paragraph (b) or (d), by sending it by fax to that machine but only if the sender’s fax machine generates a message confirming successful transmission of the total number of pages of the notice.

(2) For the purposes of this section, a company registered under the Companies Acts is deemed to be ordinarily resident at its registered office, and every other body corporate and every unincorporated body is deemed to be ordinarily resident at its principal office or place of business.

68.— (1) The Minister may prepare contingency plans to be implemented in the event of an oil supply disruption.

(2) Each oil company and oil consumer shall assist and co-operate with the Minister, the Agency and relevant public bodies in the preparation of contingency plans for, and the response to, an oil supply disruption.

(3) Each oil company and oil consumer shall, if so directed by the Minister, furnish to him or her and the Agency such information as he or she may require in respect of the preparation of contingency plans for, and response to, an oil supply disruption.]
[SCHEDULE 1

Section 32

The crude oil equivalent of imports of petroleum products, as referred to in section 32 shall be calculated using the following method:

1. The sum of net imports of crude oil, natural gas liquids (NGL), refinery feedstocks and other hydrocarbons, as defined in Annex A, Chapter 3.4 of Regulation (EC) No. 1099/2008, shall be calculated and adjusted to take account of any stock changes. From the resulting figure, one of the following figures shall be deducted for naphtha yield:

   4%,
   
   the average naphtha yield,
   
   the net actual naphtha consumption.

2. The sum of the net imports of all other petroleum products, as defined in Annex A, Chapter 3.4 of Regulation (EC) No. 1099/2008, excluding naphtha, shall be calculated and adjusted to take account of stock changes and shall be multiplied by a factor of 1.065.

3. The sum of the figures resulting from 1 and 2 represents the crude oil equivalent.

4. International marine bunkers shall not be included in the calculation.]

[SCHEDULE 2

Method for calculating the crude oil equivalent of inland consumption

Section 32

The crude oil equivalent of inland consumption, as referred to in section 32, shall be calculated using the following method:

1. Inland consumption is the sum of the aggregate “observed gross inland deliveries”, as defined in Section 3.2.2.11 of Annex C to Regulation (EC) No. 1099/2008, of the following products only: motor gasoline, aviation gasoline, gasoline-type jet fuel (naphtha-type jet fuel or JP4), kerosene-type jet fuel, other kerosene, gas/diesel oil (distillate fuel oil) and fuel oil (high sulphur content and low sulphur content) as defined in Chapter 3.4 of Annex A to Regulation (EC) No. 1099/2008.

2. The crude oil equivalent of inland consumption is calculated by multiplying by a factor of 1.2.]

[SCHEDULE 3

Method for calculating the level of stocks held

Section 32

The following method shall be used to calculate stock levels:
1. Without prejudice to the case whereby any oil stocks may be included simultaneously in both the calculation of emergency stocks and the calculation of specific stocks provided these stocks satisfy all the requisite conditions, no quantity may be counted as stock more than once. Crude oil stocks are reduced by 4 %, which corresponds to the average naphtha yield.

2. Stocks of naphtha and petroleum products for international marine bunkers within the meaning given by Section 2.1 of Annex A to Regulation (EC) No. 1099/2008 are not included.

3. Other petroleum products are included in the stock count using one of the two methods outlined at subparagraphs (a) and (b) of paragraph 5.

4. The method chosen will continue to be used throughout the whole calendar year in question.

5. The calculation may include—

[(a) all other stocks of the petroleum products identified in Chapter 3.4 of Annex A to Regulation (EC) No. 1099/2008 and calculate the crude oil equivalent by multiplying the quantities by a factor of 1.065, or]

(b) stocks of only the following products: motor gasoline, aviation gasoline, gasoline-type jet fuel (naphtha-type jet fuel or JP4), kerosene-type jet fuel, other kerosene, gas/diesel oil (distillate fuel oil) and fuel oil (high sulphur content and low sulphur content) and calculate the crude oil equivalent by multiplying the quantities by a factor of 1.2.

6. The calculation may include quantities held:

(a) in refinery tanks,
(b) in bulk terminals,
(c) in pipeline tankage,
(d) in barges,
(e) in intercoastal tankers,
(f) in inland ship bunkers,
(g) in storage tank bottoms,
(h) as working stocks,
(i) by large consumers as required by law or otherwise controlled by a Member State.

7. However, those quantities except for any held in refinery tanks, in pipeline tankage or in bulk terminals, will not be included when calculating levels of specific stocks where such stocks are calculated separately from emergency stocks.

8. The calculation will not include:

(a) crude oil not yet produced;
(b) quantities held:
   (i) in pipelines,
   (ii) in rail tank cars,
   (iii) in seagoing ships’ bunkers,
(iv) in service stations and retail stores,
(v) by other consumers,
(vi) in tankers at sea,
(vii) as military stocks.

9. When calculating stocks, the quantities of stocks calculated as set out above will be reduced by 10%. That reduction applies to all quantities included in a given calculation.

10. The 10% reduction under paragraph 9 shall not be applied when calculating the level of specific stocks or the levels of the different categories of specific stocks where those stocks or categories are considered separately from the emergency stocks, particularly with a view to verifying compliance with the minimum levels laid down for specific stocks.]
